

“Zero” Discharge Pollutants

The following list, which may be amended periodically, includes those pollutants that are known or suspected to be bioaccumulative and/or harmful to the environment. There may be no discharge of wastewaters into the sanitary sewer system that contain detectable concentrations of these chemicals as determined by EPA/HRSD approved methodologies. This list is available from the HRSD Pretreatment & Pollution Prevention office.

Tributyltin (TBT)
Dichlorodiphenyltrichloroethane (DDT)
Dioxin
Dibenzofurans*
Polychlorinated Biphenyls (PCBs)
Chlordane
Aldrin
Methoxychlor
Trifluralin
Pentachlorobenzene

*Including those of most ecological concern such as:

tetrachlorodibenzofuran
pentachlorodibenzofuran
hexachlorodibenzofuran
heptachlorodibenzofuran
octachlorodibenzofuran
