

CONSTRUCTION NOTIFICATION – September 2016

Bridge Street Pump Station

--Phase 2 Work Begins--

HRSD, your regional wastewater treatment utility, continues work on a major project to construct a new sanitary sewer pump station at 515 Bridge Street. The new structure, which was designed to blend into the neighborhood, will replace the facility built in 1945 at 4701 Victoria Boulevard. This work is to take place primarily between the hours of 7 a.m. to 5 p.m., Monday through Friday. This work should not affect your water or sewer services and can be weather and situation dependent.

The contractor has completed the first of five phases of work. Phase 1 included the insertion of the metal sheeting to retain the soil around the perimeter of the excavation site which was 30-feet deep.

As part of the Phase 2 work, the contractor will begin to form the below ground basement area that will house all of the pumps for the new station. This phase is expected to last until summer 2017.

While our contractor and project team will work diligently to minimize impacts, you may notice some odor, the construction crews onsite, heavy equipment (with back-up safety alarms), and the noise associated with construction.

Please visit the HRSD website, www.hrsd.com, for updated project information. Look for the Construction Status link. Click on Hampton and then on Bridge Street Pump Station.
