

CONSTRUCTION NOTIFICATION – March 2017

Bridge Street Pump Station

--Pipeline Installation to Begin--

HRSD, your regional wastewater treatment utility, continues work on a major project to construct a new sanitary sewer pump station at 515 Bridge Street. The new structure, which was designed to blend into the neighborhood, will replace the facility built in 1945 at 4701 Victoria Boulevard. This work is to take place primarily between the hours of 7 a.m. to 5 p.m., Monday through Friday. This work should not affect your water or sewer services and can be weather and situation dependent.

Next week, a second crew for **the contractor will begin work to install two new pipelines along Bridge Street.** Once the new pump station becomes active, these pipelines will divert the incoming and outgoing flows from the existing station to the new pump station. This will allow the existing pump station to be taken out of service, once all final connections are made, at the close of the project. **Rolling detour plans will be utilized to assist motorists around the construction activity. This work is estimated to take approximately two months to complete.**

The contractor will continue working within the fenced project area to form the below ground basement area that will house all of the pumps for the new station. This phase is expected to last until summer 2017.

While our contractor and project team will work diligently to minimize impacts, you may notice some odor, the construction crews onsite, heavy equipment (with back-up safety alarms), and the noise associated with construction.

Please visit the HRSD website, www.hrsd.com, for updated project information. Look for the Construction Status link. Click on Hampton and then on Bridge Street Pump Station.
